Terminal Disclaimer

1. The terminal disclaimer filed on 1/12/07 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of 11/889,402 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: in combination with other limitations of the claims, the cited prior arts fail to teach an operation result output selection which outputs the result of a logical operation on the first and second operation target data based on a polarization state of the ferroelectric capacitor generated by providing the second operation target data to the ferroelectric capacitor and which is connected to the first signal line, As required by claim 1; the cited prior arts also fail to teach when the result of the logical operation is outputted, the first signal line is connected to the second reference potential and the connection is released, then the second signal line is connected to the first or second reference potential corresponding to the second operation target data, and the result of the logical operation is outputted based on a potential which is generated in the first signal line when the second signal line is connected to the first or second reference potential corresponding to the second operation target data, as required by claims 4 and 15; the cited prior arts also fail to teach the application of voltage to the first signal line is stopped and the second signal line is connected to the first or second reference potential corresponding to second operation target data, and an output signal produced

at the output terminal of the output transistor in response to a potential which is generated in the first signal line when the second signal line is connected to the first or second reference potential corresponding to the second operation target data is obtained as the result of a logical operation on the first and second operation target data, as required by claim 5; the cited prior arts also fail to teach wherein the operation result binary data z substantially satisfies the following relation: $z = x \text{ AND } y$, as required by claim 8; and the cited prior arts also fail to teach an operation result output section which outputs, based on a state of the non-volatile memory element generated by providing second operation target data to the non-volatile memory element, the result of a logical operation on the first and second operation target data and which is connected to a first terminal of the non-volatile memory element, as required claim 12.

3. Claims 1-9, 12, 13 and 15 are now in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
